

I set up an online stock portfolio game on the website MarketWatch. It went from September 9th to September 30th. Overall, it was a very successful experiment because I earned a fair amount of money from my investments.

I started with \$1,000 to invest.

On September 9th, I bought:

- 10 shares of GoPro stock (GPRO) at \$65.00 = \$650.00

On September 10th, I bought:

- 124 shares of MicroVision stock (MVIS) at \$1.96 = \$243.04

On September 11th, I bought:

- 8 shares of Fifth Street Finance stock (FSC) at \$9.80 = \$78.40

A total of \$971.44 invested.

On September 24th, I sold:

- 8 shares of Fifth Street Finance stock (FSC) at \$9.32 = \$74.56

I lost \$3.84 on FSC.

On September 30th, I sold:

- 10 shares of GoPro stock (GPRO) at \$91.32 = \$913.20

I gained \$263.20 on GPRO.

- 124 shares of Microvision stock (MVIS) at \$1.94 = \$240.56

I lost \$2.48 on MVIS.

Summary:

My ending value for my account was **\$1,214.88**. In total, I gained \$256.88 on the stock market but because of trading costs of \$7 per trade, I actually only gained **\$214.88**, a 21.49% gain.

Stats			
Lauren Pericak		Rank	
ME		1
